

## Southern Company Control Center • Atlanta, GA

CriticalSpace Solutions completed design-build services to implement the control room for The Southern Company in Chamblee, GA. CriticalSpace Solutions provided turn-key services in this space. The before-and-after photos below show the room prior to, and just after, its conversion. CriticalSpace Solutions implemented a 2x2 array of 50" rear projection cubes that are driven by a display-wall controller, making the 2x2 array virtually one display. The strategy included CriticalSpace Solutions taking on a "general contractor" role to handle the raised flooring, lighting, acoustics, consoles, and front wall millwork.
